

TEMPERING OILS

Muxxol Tempering oil is formulated with highly refined paraffinic mineral oil with selected antioxidant additive system to enhance service life. Muxxol Tempering oil has the high flash point and very good thermal stability for usage of medium quenching speed throughout its usage. Muxxol Tempering oil is recommended for tempering and mar tempering at temperature up to 200 C with the least evaporation losses.

TEMPORARY RUST PREVENTIVES

Muxxol has developed a range of temporary rust preventive oils based on solvent, oil and water-miscible used for short-term inter-operational protection of tubes, rods, or strips and to protect machined components previously exposed to coolant/water-containing machines, grinding coolant & cleaners. Muxxol Rustnil oils are used for the components stored indoors in humid and challenging industrial operating conditions such as the acid-fumes atmosphere and outdoor protection of all types of ferrous components.

SOLVENT BASED RUST PREVENTIVES

Rustnil DWN 900 Series are solvent based temporary rust preventive oils, which leaves a thin waxy/oily film on the metal components.

Grades: Muxxol Rustnil DWN904, DWN902 & DWN901.

Muxxol NORUST DW9044 is a specially developed temporary rust preventive with novel performance additive packages, which leaves a thin waxy film on the surface activated metal components which require high performance rust protective film during indoor and outdoor protection of the components.

Muxxol NORUST T603DW is a specially formulated temporary rust preventive oil for tubes, pipes, hot and cold rolled steel protection. Muxxol Rustnil T603DW oil product has very good spreadability and piercing properties which ensure better dewatering and give very good protection.
